Website Portfolio

———

Design Process:

Brainstorming by looking at other developers webpages

Moodboards to figure out colours, designs and fonts

Wireframing for phones, ipads and desktop devices

Review of design/build Process

Review of build process

Design stage

What worked well

- Flexbox worked well
- SASS Live Compiler
- Working with another student to solve problems

Review of build process

Build stage

- **Improvement needs**
  - Keep digesting fundamentals
  - Tried using Bootstrap but it was styling other elements
  - Once fundamentals established, can move onto easier frameworks as I styled everything myself from start to finish
  - Very basic website
  - Ran out of time. Ensure website was entirely built by end of class.
  - Didn't stick to exact design layout.

ANY QUESTIONS?
